Out of the Blue

Well, February was a month that pulled me back into the world of medicine and healthcare. A phone call came out of the blue — an old friend had just come out of a coma. This is not the sort of thing that you expect to hear; apparently, he had scribbled down my name on a small whiteboard. Puzzled looks and internet searches followed — ending in contact and me flying from Manchester to Seville.

After meeting one of Graham's friends, we made our way to his hospital, and it was truly lovely to see my old friend — although in a bad way, he was bright and responding well. Sitting with him, I felt back at home in the hospital environment. I could explain the measurements on his monitor and, with a captive audience, ramble on about anything and everything. I left a few days later knowing he was in great hands. The Spanish healthcare system is one of the best in the world, and he was receiving state-of-the-art care.

The event was a reminder of the true complexities of everyday life. How worlds transfer across time. How meaning and values lie deep within all of us. For me, seeing Graham and visiting him, I found a deep connection with the past, and of course my dear old friend. As I type, I am thinking of him lying in his bed in Seville. It's going to be a long road back to full health, but with the care of all those around him and the support, I'm sure he will rise to the challenges of recovery.

On Substack, I've plenty of new followers. This was following a rare note that seemed to grab people's attention. If that is you then - thank you! I'm working on some new essays and deeper work on mathematical foundations, and possibly extending my recent work on the Takens Transformer. Importantly, If you let me know what you're interested in I can perhaps answer questions and write a detailed response.

Here's one of February's main essays in case you didn't see it!

The Measured World: Where Compression Replaces Correspondence

KEVIN R. HAYLETT · 17 FEB

The following essay builds upon the work explored in the Finite Tractus: The Hidden Geometry of Language and Thought. First published in May 2025. Specifically, this essay highlights the role of compression in language and points to upcoming theoretical work in foundational mathematics and physics. My hope is that the thoughts presented here are suffici…
